

CAPABILITY STATEMENT

Clean Air Tasmania was developed to accommodate the needs of Heating, Ventilation, Air-Conditioning and Refrigeration (HVAC-R) services across Tasmania.

With a focus on commercial service and compliance, and small to medium sized projects. Our approach is fresh, with a good collaboration between Mechanical Services Plumbing and Refrigeration Services we can offer our clients a one stop solution to equipment service and equipment upgrade. So, whether you have a 2kW wall split unit or a 400kW plant chiller we will have your site covered.

SERVICES

- Mechanical Services Plumbing
- Refrigeration Services
- HVAC Service and Installation
- Heatpump Installation and Maintenance
- Ventilation Solutions
- Air Quality Solutions
- Duct Cleaning and Repair
- Minor Steel Fabrication
- General Labour and Cleaning

OUR GOALS

Our goal is to supply the best outcomes for our clients. We do this through on-going service and options derived from service and site needs along with a motive to avoid breakdowns and down time.

BREATHE CLEAN AIR

HEAT SHIELD FIBREGLASS PIPE LAGGING

Installed as a solution to allow air-conditioning pipe work to be installed through a fire void in a marine application.

REFRIGERATED CASE CLEANING

We service a variety of supermarkets and firmly believe that well maintained equipment avoids costly breakdowns. Keeping our sites Clean

SECURITY OF EQUIPMENT

As well as maintaining your equipment, we offer security solutions to ensure its safety.

Our diverse skill set can allow us to supply your site with a custom security solution not just for your HVAC-R equipment, but anything from a gas bottle to a generator.

VRV AND HEAT RECOVERY

One of our strengths is the installation and service of large-scale variable volume refrigeration plant and equipment – installing more than just heatpumps.

BREATHE CLEAN AIR

SERVICE AND REPAIR

Things fail. Even when they do, we are prepared to get you up and going again. Your sites operation and comfort are important to the users and profitability. Make sure you are in good hands when things go wrong.

CUSTOM FABRICATION AND INSTALLATION

One size does not always fit all. Our team can modify and fabricate refrigerated solutions to suit your needs.

CUSTOM HVAC

Ventilation solutions are not always as easy as a single fan solution. Clean Air Tasmania are no stranger to this. Having installed numerous pressurisation proving systems which allow for the safe operation of electrical components in highly explosive zones, we are continually rising to the challenge of custom solutions for differing conditions.

KEEPING IT SAFE

The Clean Air Tasmania team are commonly working in hazardous locations and with hazardous materials.

We enjoy HVAC-R and want to be doing it for many years to come, so safety is important to us. Through the correct use of our safety management procedures and PPE we always ensure we are looking after the environment, our clients, our surroundings and ourselves.
